Is your water softener throwing money down the drain?

Trust The Water Experts®

Reduce Operating Costs With The World's Most Efficient Commercial Water Softener

Culligan Commercial Water Softeners

- CSM™
- Hi-Flo® 55E
- Hi-Flo® 50

The combination of Culligan's patented MVP™ electronic controller and our brine reclaim system create huge operating efficiencies. Reduce your salt expense by 25% or more with this simple upgrade. Add our exclusive, patented Aqua-Sensor® technology to your system, and increase your savings even more! Together, all three components give you the world's most efficient commercial water softener!

Culligan® Salt Saving System

The Culligan Salt Saving System recycles a portion of the regeneration water. The system not only conserves water, but also makes your water softener more environmentally friendly. Here's how to cut costs with the Culligan® Salt Saving System:

- Decrease salt expense by 25% or more
- Conserve water with less wastewater to drain
- With less salt being used, you'll have fewer salt deliveries, use less storage space and spend less time adding salt to the system.

MVP™

Culligan's MVP™ electronic control effectively operates the water softening system with patented program logic such as progressive flow. The MVP is adaptable to many types of softeners, filters and dealkalizers and is the *key* to delivering all the cost-saving benefits of the SaltSavr™ System.

Aqua-Sensor®

Most water softeners regenerate based on time or water flow, but Culligan's patented Aqua-Sensor® technology *initiates regeneration only when required*. As a result, adding Aqua-Sensor® to your water softening system will conserve even more salt and water.
